

Auto Ticket Classification using Flow Designer

Final Project Report & FSD Documentation

Prepared from the project details available in this conversation and the supplied template archive. Unknown details are marked rather than assumed.

Introduction

Project Title: Auto Ticket Classification using Flow Designer

Platform: ServiceNow

Team members: Not provided.

Project overview

Purpose: Automate classification of common school IT helpdesk tickets at creation and generate a caller confirmation email.

Features: Custom Incident Workflow table; category/subcategory choices and dependency; Flow Designer record-created automation; four classification branches; email action; testing; update set XML export.

System design

Table: Incident Workflow. Fields: Number (Auto Number), Caller (Reference sys_user), Category (Choice: Network, Hardware, Access, Performance), Subcategory (Choice: Wi-Fi, Projector, Forgot Password, Slow Computer), Short Description (String), Description (String), State (Choice: New, In progress, On hold, Resolved, Closed), Assigned Group (Reference sys_user_group), Assigned to (Reference sys_user). Subcategory depends on Category.

Flow specification

Flow name: Auto Classify School IT Tickets. Application: Global. Trigger: Record Created on Incident Workflow. Entry condition: Category is Empty. Branches: Short description contains Wi-Fi OR Network → Network/Wi-Fi; contains Projector → Hardware/Projector; contains Forgot password → Access/Forgot Password; contains Slow Computer → Performance/Slow Computer. Email action: To Caller.Email; subject "Your Request for the issue has been submitted"; body "Ticket confirmation message".

Setup / deployment

The project was built in a ServiceNow Personal Developer Instance. The Project Update Set was changed to Complete and exported using Related Links → Export to XML. The XML is the configuration/deployment artifact. No credentials are included.

Testing

Four classification scenarios were reported completed. Email record and preview were inspected. The evidence supports generation/preview, not independent proof of external mailbox delivery.

Screenshots / demo

Insert actual screenshots and the actual demo-video URL here. No demo URL was provided in the available information.

Known issues and future enhancements

Known limitation: exact keyword matching may not cover synonyms or spelling variations.

Future enhancements: broader keyword coverage, fallback/manual review, assignment-group routing, analytics, and formal load testing.

Conclusion

The configured workflow automates classification for the four defined ticket types and creates a confirmation email action. The completed update set was exported to XML for retention/submission.

Actual Project Screenshots

The screenshots in this section are taken from the submitted project PDF and show the actual ServiceNow project configuration and testing evidence.

This screenshot shows the 'Incident WorkFlow' form for record INCO0511. The form is titled 'Incident WorkFlow INCO0511' at the top. The main form area contains several fields: 'Number' (INCO0511), 'Caller' (Alfonso Griglen), 'Category' (Network), 'Subcategory' (Wi-Fi), 'Short description' (My college Has issue with Network), and 'Description'. The 'State' dropdown is set to '-- None --'. The 'Assigned group' and 'Assigned to' fields are empty. The form has 'Update' and 'Delete' buttons at the top right and bottom left. A red box highlights the 'Number', 'Caller', 'Category', 'Subcategory', 'Short description', and 'Description' fields.

Actual Ticket Form Screenshot

This screenshot shows the 'Auto Classify School IT Tickets' workflow in ServiceNow. The workflow is titled 'Auto Classify School IT Tickets' and is currently 'Inactive'. The workflow steps are: 1. If SD is Performance, then 2. Update Incident WorkFlow Record. The 'Update Incident WorkFlow Record' step is expanded, showing its 'Action Properties' and 'Action Inputs'. The 'Action Properties' section shows the 'Action' is 'Update Record'. The 'Action Inputs' section shows the 'Record' is 'Trigger... Incident WorkFlow...', the 'Table' is 'Incident WorkFlow [u_incident_w...]', and the 'Fields' are 'Category' (Performance) and 'Subcategory' (Slow Computer). The 'Done' button is highlighted with a red box. The right sidebar shows the 'Data' section with a list of variables: 'Incident WorkFlow Record' (Record), 'Incident WorkFlow Table' (Table), 'Run Start Time UTC' (Date/Time), and 'Run Start Date/Time' (Date/Time).
