

Auto Ticket Classification using Flow Designer

Development Phase – Functional & Performance Testing

Prepared from the project details available in this conversation and the supplied template archive. Unknown details are marked rather than assumed.

Project details

Project Name: Auto Ticket Classification using Flow Designer

Date: 01 October 2026

Environment: ServiceNow PDI instance dev428996 (as shown in the user-provided screenshot; status was Online on 28-Sep-2026).

Functional test cases

TC-01 Wi-Fi: Create ticket with Short Description “WiFi not working in library”. Expected: Network / Wi-Fi and confirmation email generated. Actual: User reported test completed; email preview/record was inspected. Result: Passed as reported.

TC-02 Projector: Short Description “Projector not turning on”. Expected: Hardware / Projector. Actual: User reported test completed. Result: Passed as reported.

TC-03 Password: Short Description containing “Forgot password”. Expected: Access / Forgot Password. Actual: User reported test completed. Result: Passed as reported.

TC-04 Slow computer: Short Description containing “Slow Computer”. Expected: Performance / Slow Computer. Actual: User reported test completed. Result: Passed as reported.

Email verification

An email record was inspected with Type=send-ready, Target=Incident Workflow: INC0001044, Notification type=SMTP, subject “Your Request for the issue has been submitted”, recipient abraham.lincoln@example.com. Preview showed “Ticket confirmation message”. This confirms email generation/preview in the instance; external mailbox delivery was not independently verified.

Performance testing

No response-time, throughput, concurrency, or load-test measurements were supplied. Performance is therefore documented qualitatively only; do not claim a numeric benchmark.

Known limitations

Matching relies on configured keywords and may not classify synonyms or misspellings. User-provided test outcomes are recorded as reported, not independently rerun in this document.

Actual Project Screenshots

The screenshots in this section are taken from the submitted project PDF and show the actual ServiceNow project configuration and testing evidence.

This screenshot shows the configuration page for an Incident WorkFlow named 'INC00511'. The page includes a header with navigation icons and 'Update' and 'Delete' buttons. The main form contains several fields: 'Number' (INC00511), 'State' (None), 'Assigned group', and 'Assigned to'. A red box highlights the 'Number' field, the 'Caller' field (Alfonso Griglen), the 'Category' (Network) and 'Subcategory' (Wi-Fi) dropdowns, the 'Short description' field (My college Has issue with Network), and the 'Description' field. Below the form, there are 'Update' and 'Delete' buttons.

Actual Test Result Screenshot

This screenshot shows the configuration page for an Email workflow. A 'Preview Email' dialog box is open, displaying the email content. The dialog box has a close button (X) in the top right corner. The email content includes a greeting, a message about the request being solved, and a reference ID. The background shows the email configuration form with fields for 'Subject', 'Recipients', 'Body', 'Content type', and 'Headers'. A red box highlights the 'Preview Email' dialog box. Below the form, there are 'Update' and 'Delete' buttons. At the bottom left, there is a 'Related Links' section with a link to 'Preview Email'.
